

Math Homework Answer Key: Number Forms, Comparing & Number-Line Rounding

Student: Luna Lee

Date: September 16, 2026

Standard: CCSS.MATH.CONTENT.4.NBT.A.2-3 — Read, write, compare, and round whole numbers.

1. Write 564,087 in expanded form.

Use each nonzero digit's place value.

$$500,000 + 60,000 + 4,000 + 80 + 7.$$

2. Write $30,000 + 7,000 + 800 + 2$ in standard form.

The tens place is zero.

$$37,802.$$

3. Write 100,002 in word form.

There are 100 thousands and 2 ones.

One hundred thousand, two.

4. What is the value of the 6 in 268,041?

The 6 is in the ten-thousands place.

$$60,000.$$

5. Write four hundred sixteen thousand, eighty-seven in standard form.

416 thousands + 87; the hundreds place is zero.

$$416,087.$$

6. Compare 38,675 ____ 9,100. Explain.

Compare aligned places: 3 ten thousands > 0 ten thousands.

$$38,675 > 9,100.$$

7. Compare 16,420 ____ $10,000 + 6,000 + 400 + 2$.

The first difference is the tens place: $2 > 0$.

16,420 > 16,402.

8. Compare without adding: $34,593 + 6,781$ ____ $34,593 + 6,609$.

The common addend is the same, and $6,781 > 6,609$.

The first sum is greater.

9. Find all digits: $23,489 < 2\square,650 < 26,472$.

23,650, 24,650, and 25,650 work; 26,650 is too large.

3, 4, 5.

10. Population means the number of people living in a place. Use this textbook data: St. Louis 319,294; Anchorage 291,826; Oakland 390,724. Which TWO OTHER cities have populations not greater than Oakland? What does “not greater than” mean?

Both numbers are below 390,724. The data are historical textbook values, not current estimates.

St. Louis and Anchorage; less than or equal to ($\leq$).

11. Round 267 to the nearest 10.

The neighboring multiples are 260 and 270. Halfway is $(260 + 270) \div 2 = 265$.

The distances are $267 - 260 = 7$ and $270 - 267 = 3$. 270 is closer because 3 is less than 7. **Rounded number: 270.**

12. Round 450 to the nearest 100.

The neighboring multiples are 400 and 500. Halfway is $(400 + 500) \div 2 = 450$.

The distances are $450 - 400 = 50$ and $500 - 450 = 50$. The distances are equal. Neither end is closer. We agree to choose the greater end at halfway. **Rounded number: 500.**

13. Round 478 to the nearest 100.

The neighboring multiples are 400 and 500. Halfway is $(400 + 500) \div 2 = 450$.

The distances are $478 - 400 = 78$ and $500 - 478 = 22$. 500 is closer because 22 is less than 78. **Rounded number: 500.**

14. Round 3,641 to the nearest 1,000.

The neighboring multiples are 3,000 and 4,000. Halfway is $(3,000 + 4,000) \div 2 = 3,500$.

The distances are $3,641 - 3,000 = 641$ and $4,000 - 3,641 = 359$. 4,000 is closer because 359 is less than 641. **Rounded number: 4,000.**

15. Round 6,500 to the nearest 1,000.

The neighboring multiples are 6,000 and 7,000. Halfway is $(6,000 + 7,000) \div 2 = 6,500$.

The distances are $6,500 - 6,000 = 500$ and $7,000 - 6,500 = 500$. The distances are equal. Neither end is closer. We agree to choose the greater end at halfway. **Rounded number: 7,000.**

16. Round 9,426 to the nearest 1,000.

The neighboring multiples are 9,000 and 10,000. Halfway is $(9,000 + 10,000) \div 2 = 9,500$.

The distances are $9,426 - 9,000 = 426$ and $10,000 - 9,426 = 574$. 9,000 is closer because 426 is less than 574. **Rounded number: 9,000.**

17. Round 17,139 to the nearest 1,000.

The neighboring multiples are 17,000 and 18,000. Halfway is $(17,000 + 18,000) \div 2 = 17,500$.

The distances are $17,139 - 17,000 = 139$ and $18,000 - 17,139 = 861$. 17,000 is closer because 139 is less than 861. **Rounded number: 17,000.**

18. Round 70,628 to the nearest 10,000.

The neighboring multiples are 70,000 and 80,000. Halfway is $(70,000 + 80,000) \div 2 = 75,000$.

The distances are $70,628 - 70,000 = 628$ and $80,000 - 70,628 = 9,372$. 70,000 is closer because 628 is less than 9,372. **Rounded number: 70,000.**

19. Round 148,796 to the nearest 100,000.

The neighboring multiples are 100,000 and 200,000. Halfway is $(100,000 + 200,000) \div 2 = 150,000$.

The distances are $148,796 - 100,000 = 48,796$ and $200,000 - 148,796 = 51,204$. 100,000 is closer because 48,796 is less than 51,204. **Rounded number: 100,000.**

20. Round 824,137 to the nearest 10,000.

The neighboring multiples are 820,000 and 830,000. Halfway is $(820,000 + 830,000) \div 2 = 825,000$.

The distances are $824,137 - 820,000 = 4,137$ and $830,000 - 824,137 = 5,863$. 820,000 is closer because 4,137 is less than 5,863. **Rounded number: 820,000.**
