

Math Worksheet Answer Key: Rounding: Number Lines, Halfway & Distance

Student: Luna Lee

Date: September 16, 2026

Standard: CCSS.MATH.CONTENT.4.NBT.A.3 — Use place value to round multi-digit whole numbers.

1. Round 243 to the nearest 10.

The neighboring multiples are 240 and 250. Halfway is $(240 + 250) \div 2 = 245$.

The distances are $243 - 240 = 3$ and $250 - 243 = 7$. 240 is closer because 3 is less than 7. **Rounded number: 240.**

2. Round 245 to the nearest 10.

The neighboring multiples are 240 and 250. Halfway is $(240 + 250) \div 2 = 245$.

The distances are $245 - 240 = 5$ and $250 - 245 = 5$. The distances are equal. Neither end is closer. We agree to choose the greater end at halfway. **Rounded number: 250.**

3. Round 254 to the nearest 10.

The neighboring multiples are 250 and 260. Halfway is $(250 + 260) \div 2 = 255$.

The distances are $254 - 250 = 4$ and $260 - 254 = 6$. 250 is closer because 4 is less than 6. **Rounded number: 250.**

4. Round 449 to the nearest 100.

The neighboring multiples are 400 and 500. Halfway is $(400 + 500) \div 2 = 450$.

The distances are $449 - 400 = 49$ and $500 - 449 = 51$. 400 is closer because 49 is less than 51. **Rounded number: 400.**

5. Round 450 to the nearest 100.

The neighboring multiples are 400 and 500. Halfway is $(400 + 500) \div 2 = 450$.

The distances are $450 - 400 = 50$ and $500 - 450 = 50$. The distances are equal. Neither end is closer. We agree to choose the greater end at halfway. **Rounded number: 500.**

6. Round 6,912 to the nearest 1,000.

The neighboring multiples are 6,000 and 7,000. Halfway is $(6,000 + 7,000) \div 2 = 6,500$.

The distances are $6,912 - 6,000 = 912$ and $7,000 - 6,912 = 88$. 7,000 is closer because 88 is less than 912. **Rounded number: 7,000.**

7. Round 5,379 to the nearest 1,000.

The neighboring multiples are 5,000 and 6,000. Halfway is $(5,000 + 6,000) \div 2 = 5,500$.

The distances are $5,379 - 5,000 = 379$ and $6,000 - 5,379 = 621$. 5,000 is closer because 379 is less than 621. **Rounded number: 5,000.**

8. Round 43,215 to the nearest 1,000.

The neighboring multiples are 43,000 and 44,000. Halfway is $(43,000 + 44,000) \div 2 = 43,500$.

The distances are $43,215 - 43,000 = 215$ and $44,000 - 43,215 = 785$. 43,000 is closer because 215 is less than 785. **Rounded number: 43,000.**

9. Round 70,628 to the nearest 10,000.

The neighboring multiples are 70,000 and 80,000. Halfway is $(70,000 + 80,000) \div 2 = 75,000$.

The distances are $70,628 - 70,000 = 628$ and $80,000 - 70,628 = 9,372$. 70,000 is closer because 628 is less than 9,372. **Rounded number: 70,000.**

10. Round 385,617 to the nearest 10,000.

The neighboring multiples are 380,000 and 390,000. Halfway is $(380,000 + 390,000) \div 2 = 385,000$.

The distances are $385,617 - 380,000 = 5,617$ and $390,000 - 385,617 = 4,383$. 390,000 is closer because 4,383 is less than 5,617. **Rounded number: 390,000.**

11. Round 362,113 to the nearest 100,000.

The neighboring multiples are 300,000 and 400,000. Halfway is $(300,000 + 400,000) \div 2 = 350,000$.

The distances are $362,113 - 300,000 = 62,113$ and $400,000 - 362,113 = 37,887$. 400,000 is closer because 37,887 is less than 62,113. **Rounded number: 400,000.**

12. Round 982,638 to the nearest 1,000.

The neighboring multiples are 982,000 and 983,000. Halfway is $(982,000 + 983,000) \div 2 = 982,500$.

The distances are $982,638 - 982,000 = 638$ and $983,000 - 982,638 = 362$. 983,000 is closer because 362 is less than 638. **Rounded number: 983,000.**
